Foshan Wenteng Wine Cellar Engineering Co., Ltd. is a cutting-edge enterprise deeply engaged in the field of constant temperature wine cellar engineering, carrying the industry accumulation and professional dedication of its founder Mr. Zhao Qiaosheng for more than 20 years. Mr. Zhao Qiaosheng comes from Shaoguan, Guangdong, specializing in refrigeration at university. After graduating 20 years ago, he joined Kelon Refrigerator Company and accumulated solid experience in refrigeration technology and home appliance industry operations; After being acquired by Hisense, Kelon gained precise insights into the market potential of the constant temperature wine storage track and resolutely entered the constant temperature wine cabinet industry. He successively worked for the top three brands in the industry and held senior management positions, deeply involved in product research and development, market layout, and team management, and comprehensively mastered the core technologies, industry pain points, and user needs in the field of constant temperature wine storage.

In 2018, Mr. Zhao Qiaosheng teamed up with friends to establish a customized constant temperature wine cabinet company, further consolidating the ability to provide customized services and implement engineering projects; In order to fulfill the original intention of "building high-quality constant temperature wine cellars with professional strength", he independently founded Foshan Wenteng Wine Cellar Engineering Co., Ltd., embarking on a new journey of deepening the subdivision field.

不锈钢表面真空高温氧化电弧钛离子电镀，通透高强度纳米无指纹涂层：其具有抗指纹的效果，增加耐磨和易打理等优点；如：乱纹>拉丝>喷砂>镜面，哑光>亮光。

Stainless steel surface vacuum high-temperature oxidation arc titanium ion electroplating, transparent high-strength nano fingerprint free coating: it has the advantages of anti fingerprint effect, increased wear resistance and easy maintenance; For example: random pattern>wire drawing>sandblasting>mirror finish, matte finish>glossy finish.

恒温酒柜的好处：

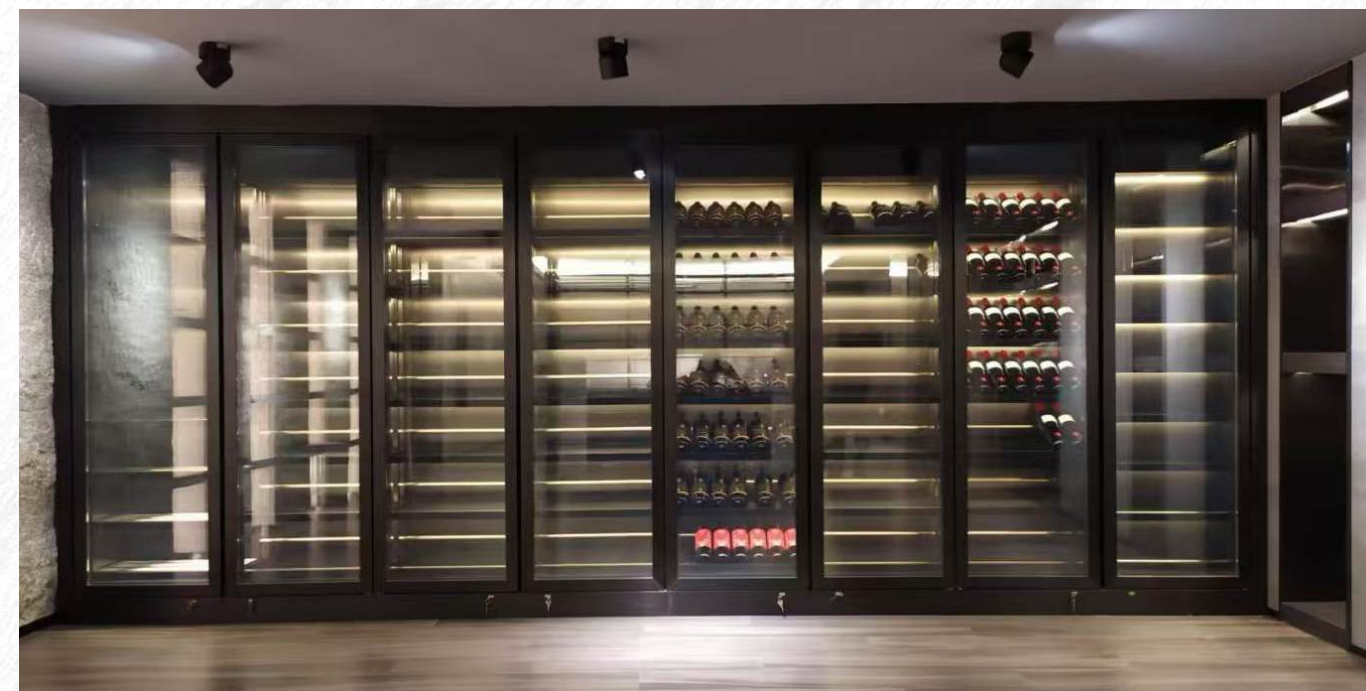

- 1、恒温性高：红酒保存忌讳温度的波动，所以采用精密压缩机，保持温度的恒定是酒柜的首要目的；
- 2、湿度调节：为了防止瓶塞干燥萎缩，酒柜内部需要保持在55%以上的湿度。这是冰箱所无法达到的；
- 3、避振：振动会对葡萄酒造成一定的伤害，所以采用防振压缩机，实木木架是必要的；

1. High temperature stability: Red wine storage should avoid temperature fluctuations, so a precision compressor is used to maintain a constant temperature, which is the primary purpose of the wine cabinet;
2. Humidity regulation: In order to prevent the cork from drying out and shrinking, the humidity inside the wine cabinet needs to be maintained at 55% or above. This is something that a refrigerator cannot achieve;
3. Vibration isolation: Vibration can cause certain damage to wine, so it is necessary to use vibration isolation compressors and solid wood frames;

经典酒柜系列

不锈钢酒架系列

STAINLESS STEEL WINE RACK SERIES

通常贮存葡萄酒的最佳温度通常在12~18℃之间

一般来说，摄氏7至18℃的温度也不会有损害。

储存葡萄酒的温度最好要保持恒定，需要尽量避免短期的温度波动。通常温度越高，酒的熟化越快；温度低时，酒的成长就会较慢。

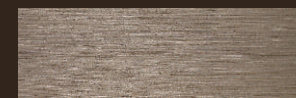

The optimal temperature for storing wine is usually 10℃,
Generally speaking, temperatures between 7 and 18℃
Celsius will not cause any damage.

It is best to maintain a constant temperature when storing wine and
avoid short-term temperature fluctuations as much as possible.

Usually, the higher the temperature
High, the faster the wine matures; When the
temperature is low, the growth of wine will be slower.
